Hydraulic Flow Rates for Sump and Flow By Conditions for Edmonton and Northern Alberta Catch Basin Grates

Trojan Industries Inc.

January 2014

Comments January 2014

This is a first draft copy of theoretical hydraulic flow rates for Trojan's set of catch basin grates. These values have not been verified. Please let us know if there are any apparent errors or omissions. These values are theoretical values that have been calculated using the methods from HEC 22. Where possible, these values have been compared with those derived by others. Please note that the values referenced to Calgary Stantec (1996) were taken from the City of Calgary Design Standards as posted on the City of Calgary website in 2013. Values attributed to Wilson (1983) are from his thesis, "Capacities of Catch Basin Inlets Based on Use in Alberta". Values attributed to Townsend and Moss (1980) were measured from a model study.

These values are given with and without a safety factor (SF) so that the design engineer can choose when and how to include this and/or any other safety factor. The safety factor used herein is 0.5 * the intercepted flow rate. The safety factor is intended to allow for some trash clogging but does not preclude the need for catch basin maintenance. It should be emphasized that when flat grates (without side inlets) such as the K-3 or TF-51 (without side inlet) are prone to clogging and should not be used in sump locations without an additional safety factor.

These values are provided for the purpose of assisting in the selection of an appropriate style and number of grates. Each municipality has their own preferred styles of grates. Some grates have fallen out of favour such as the TF-33, the TF-35 and the K-2. Many of the grates have additional options such as two piece side inlets or locking grates. Some municipalities require "logo" frame and grates which carry the name of the municipality. It is essential to check the design standards for the municipality for which the design is being done to ensure the correct styles and options are chosen.

The selection of the concrete slab used on the top of the concrete catch basin depends on which frame and grate is selected. The TF-51 (with side inlet) goes on a sloped slab whereas the TF-51 without side inlet goes on a flat slab (K-3). Furthermore, northern and southern Alberta use different concrete slabs so it is important to select a frame and grate that is appropriate to the region of interest.

Finally, there are various naming systems used across the province. Some names are ambiguous such as the TF-51 which can be the name of the frame and grate with or without the side inlet. Some frame and grates such as the K-7 come in either a single or, more commonly, a double which should be clarified in the design. A double consists of a double frame with two grates that goes on one concrete catch basin.

When in doubt, give us a call! Take the time to do it right and avoid a Change Order later!

An Engineer's Guide to Specifiying Manhole Covers, Grates and Frames for Northern Alberta

(including the greater Edmonton area and north but not including the City of Edmonton) *October 2013*

Manhole Covers (& Frames)			
TF-39 cover diam 565mm	standard	can get locking with cam lock	fits on slab top
	standard	can get locking with bar lock	
	standard	can get low profile frame	
	standard	can get 1 or 4 vent holes	
	standard	can get labeled sewer, water, storm, sanitary	
	standard	can get logo for larger communities	
TF-80 diam 643mm	floating cover (& frame)	can get logo for larger communities	fits on slab top
TF-90 diam 658mm	floating cover (& frame)	sealed to prevent infiltration (gasket)	fits on slab top
TF-41 diam 918mm	large cover	can get labeled water	fits on 1200mm slab top w 900mm opening

Curb and Gutter Grates (& Frames)			
TF-51A (T-K1A)*	two piece side inlet to facilitate side grate replacement		slots are diagonal
	grate is flat & rectangular	fits on tee top on min 900mm barrel	
TF-51 (TK-1)*	one piece side inlet	fits on tee top on min 900mm barrel	slots are diagonal
	grate is flat & rectangular	can get low profile frame	
TF-33	rolled faced curb	fits on slab top	frame diam 736mm
TF-35	round faced curb	fits on slab top	frame diam 736mm
TF-36	small & straight curb	fits on slab top	frame diam 736mm
	one or two piece grate option		
TF-36A	large and straight curb	fits on slab top	frame diam 842mm
	two piece grate		

* specify 'with curb inlet' to ensure inclusion of curb inlet

Just Gutter Grates (& Frames)			
TF-51 (T-K1)**	flat	can get locking	fits on K-3 top min 900mm barrel
T-K7 or SK7	rolled faced		fits on K-7 top on min 600mm barrel
DK7	double frame with 2 grates of SK7		fits on DK-7 top on min 900mm barrel

** specify 'without curb inlet' to avoid getting curb inlet

Circular Grates (& Frames)

TF-39	standard circular grate (domed)	slab top	
	cover diam 565mm		
TF-38	lane paving (V-top)	slab top	
TF-80 (Leduc)	floating cover (& frame)	cover diam 643mm	fits on 900mm slab tops

Specialty Grates

TF-39 standard trashguard
TF-39 short trashguard

Ductile iron is used for thinner or larger parts and parts at risk of damage by snowplows (side inlets) The following items are made with ductile iron: TF-36 & 36A top grate insert, TF-80 & 90 cover & grate, TK-7 grate, & TF-51 inlet & road grate			
standards of cast iron	good	better	best (AASHTO M-306)
gray iron is ASTM A48	CL20B	CL25B or 30B	CL35B
ductile iron is ASTM A536	GR 60-40-18	GR 65-45-12	GR 80-55-06
For example, most northern Alberta communities specify ASTM A48 CL20B for gray iron and ASTM A536 CL 60-40-18 for ductile.			

Always check the specifications for the municipality for which the drainage is being designed.
Drawings for these and other municipal castings are available on our website: www.trojanindustries.com
Save time and money by calling TROJAN Edmonton (1 800 272 5662 or 780 474 1478) if municipal specs differ from this chart.

TROJAN INDUSTRIES

An Engineer's Guide to Specifiying Manhole Covers, Grates and Frames for City of Edmonton

The City of Edmonton is using the AASHTO M-306 specifications and all frames, covers, and grates are undipped. *October 2013*

Manhole Covers (& Frames)			
TF-39	No. 6	just frame	can get low profile frame
	No. 6A	just cover	can get locking with bar lock
	cover diam 565mm	fits on 900mm slab tops	can get labeled water
TF-80	TYPE 80	floating frame (DI) and cover (DI)	
	cover diam 643mm	fits on 900mm slab tops	can get labeled epcor water
TF-90	TYPE 90	floating frame (DI) and cover (DI)	
	cover diam 658mm	fits on 900mm slab tops	sealed to prevent infiltration (gasket)
TF-41	TYPE 41	frame and grate	can get labeled water
	cover diam 918mm	fits on 1200mm slab tops w 910mm opening	
PM-A	cover diam 805mm	epcor power and water covers	

For access MH deeper than 40 feet or sewers 1200mm diam, must use slab top with 900mm opening with frames and covers min diameter 900mm *i.e.* TF-41.

Curb and Gutter Grates (& Frames)			
TF-51	F-51 (rect & flat)	frame, grate, side inlet and side inlet grate	fits on Tee Top
	No. 17	TF-51 just frame	for capacities greater than that of TF-51 without curb inlet
	No. 18	TF-51 just grate (DI)	grate is flat & rectangular
	No. 19	TF-51 just side inlet back	fits on 900mm tee top
	No. 20	TF-51 just side inlet insert (DI)	
	N.B. specify 'with curb inlet' to ensure inclusion of curb inlet		
TF-36	No. 2A	frame	fits on 600, 750 or 900mm slab top CB only
	frame diam 736mm	grate and side inlet (DI)	
TF-36A	No. 4A	frame and grate	fits on 1200mm slab top (635 opening) CBMH only
	frame diam 842mm	grate and side inlet (DI)	conical tops w 635mm opening preferred
Just Gutter Grates (& Frames)			
TF-51/ TK-1	No. 17	TF-51 just frame	fits on K-3 top | grate is flat & rectangular
	No. 18	TF-51 just grate (DI)	for capacities greater than that of TF-36/2A or no curb
	N.B. specify 'without curb inlet' to avoid getting curb inlet		fits on 900mm tee top
TK-7/ SK-7	K-7 (rect & sloped)	frame and grate (DI)	current preferred inlet for residential areas
	K-7	single frame and grate (DI)	fits on K-7 top on min 600 barrel
DK-7	K-7	double frame and grate (DI)	fits on DK-7 top on min 900 barrel

Circular Grates (& Frames)			
TF-39	No. 6	just frame	for off roadway locations or temporary inlets
	No. 6B	just grate domed	fits on slab tops min 600 barrel
	No. 6C	just grate flat	fits on slab tops min 600 barrel
TF-38	No. 8	frame and grate (V-top)	fits on slab tops min 600 barrel

Specialty Grates
TF-39 standard trashguard
TF-39 short trashguard

Ductile iron is used for thinner or larger parts and parts at risk of damage by snowplows (side inlets).
The following items are made with ductile iron:
TF-36 top grate insert, TF-36A top grate insert, TF-80 & TF-90 frame & cover, TK-7 grate, and TF-51 inlet & road grate
The AASHTO M-306 standard for ductile iron is ASTM A536 GR 80-55-06.
The AASHTO M-306 standard for grey iron is ASTM A48 CL 35B.

Save time and money by calling TROJAN Edmonton with questions about these and other products or visit our website at www.trojanindustries.com

January 2014

AASHTO M 306 Standard Specification for Drainage, Sewer, Utility, and Related Castings

What is AASHTO M-306 Standard Specification for Drainage, Sewer, Utility, and Related Castings? How is this different from H-20 and HS-20?

H 20 and HS20 are AASHTO standards from 1944 which were originally intended for bridge and road loading. They detail a representative truck having axles of a particular axle load and location that would represent most of the trucks that the road or bridge would be subjected to. The H 20 truck is represented as having a front axle of 8000 lbs (35.6 kN) while the rear axle is 32,000 lbs (142.3 kN). The HS20 allows for an additional rear axle of 32,000 lbs (142.3 kN). While this standard does not address municipal castings *per se*, the general application of this standard to castings has been that if the casting can bear the 16,000 lbs (71.2 kN) which is the equivalent of one wheel load (one half of the axle) of a 32,000 lb axle, the casting is considered to meet the equivalent of the H 20 or HS20 standard.

Using this type of standard for municipal castings has many issues including:

What is an appropriate area over which to apply the load? For how long? How should the per axle load be divided? Does a 'wheel' include both of the dual wheels? What about super singles? Is a safety factor included or should one be added? What about materials standards? Manufacturing quality? Inspection and certification?

In Canada, a similar problem has developed with engineers trying to use a bridge/road standard (CL-W) to specify municipal castings. The CL-W standard does not specifically address municipal castings. Again, it does not answer the above questions.

The AASHTO system has since introduced the M-306 standard to address these issues.

Issues addressed in the M-306 standard that are not addressed in either the H 20/HS20 system or the CL-W system:

- Loading details are specified: A 178 kN load is applied to an area 229 mm by 229 mm at a constant rate between 45 kg/sec and 454 kg/sec. The load is held for 1 minute. The testing machine must be NIST compliant. To pass this test, there can be no cracks and any deformation must be less than 3.2mm.
- The material is specified: ASTM A 48 Class 35B for gray cast iron and ASTM A 536 Grade 80-55-06.
- Quality of manufacture is specified.
- Inspection and Certification is required.
- A safety factor of 2.5 times is used.

Why isn't ASTM A48 or ASTM A536 designation enough without M 306?

The traditional load tests done on test rods for the cast iron and ductile iron in ASTM A48 and A536 only measure the strength of the iron without considering the shape of the final casting. It is possible for a casting to fail the proof load test (due to poor design in shape) while passing the strength requirements for the material itself.

N.B. In 2012, the City of Edmonton switched to a modified form of the M-306 standard.
